DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-31 are drawn to a system and method for entering into foreign exchange transactions.
 - II. Claims 32-34 are drawn to a system for revaluing multiple positions associated with multiple currencies.
 - III. Claims 35-37 are drawn to a system for automatic hedging of foreign currency exposure.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I - III are directed to related processes and systems involving currency exchange. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j).

In the instant case, the inventions as claimed are directed toward distinct transactions involving multiple currencies. Namely, invention I involves evaluating trade orders by applying price factors to a foreign exchange rate to generate a deal price and determining whether to execute the trade based on the evaluation. Invention II involves revaluing multiple positions by applying received indicative rates to the values of the

multiple positions. Invention III is drawn toward automatically hedging foreign currency exposure by generating a hedging offer based on a recognized first offer for a security in a particular currency. Clearly, given the disparate transactions involved in each invention, the design, mode of operation, function, and effect of each invention would necessarily involve materially different designs, modes of operation, functions, and effects.

Therefore, each of the inventions, as claimed, clearly involves materially different designs, modes of operation, functions, and effects. Furthermore, the inventions, as claimed, do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Bradley Wright whose telephone number is (571) 272-5872. The examiner can normally be reached on M - F 8:30am - 5:00pm.
